

## Adding a Page

Pages allow you to create full pages of text, images or HTML Code, which can be accessed through the main course page; this can greatly enhance the depth of your course without cluttering your main page.

1. Log on to Moodle and navigate to your course then turn editing on by selecting the button **Turning editing on**.
2. Select **Add an activity or resource** and then the **Page** icon

3. Enter a **Name** for the Page and if you wish, write a brief summary in the **Description** area.

The screenshot shows a form for creating a page, divided into two main sections: **General** and **Content**.

**General Section:**

- Name:** A text input field, highlighted with a red rectangle. An orange arrow points to it from above.
- Description:** A rich text editor with a toolbar containing options like Paragraph, Bold (B), Italic (I), List, Link, Image, and Font family/size. Below the editor is a "Path: p" label.
- Display description on course page:** A checkbox that is currently unchecked.

**Content Section:**

- Page content\*:** A rich text editor with a toolbar similar to the one in the General section, used for adding content to the page.

The **Content** section is enclosed in a red rectangular border.

4. In the **Content** section, you can use the editor to design your page or you can copy HTML code for more advance features.
5. Click **Save** once you are happy with page, you can return and edit at any time to add more content
